

# Anytime Assets & Constant Aviation

## Visual Tracking & Attachments

Constant Aviation utilizes our system for all their assets. Our asset images and attachments help to quickly identify assets and their related documents such as: manuals, procedures, calibration certifications, and more. A key feature utilized by Constant is the ability to store attachments and images with an asset.

“The ability to search, having the pictures, being able to identify something by the picture.”

-Senior Materials Mgr., Constant Aviation-

Tracking asset movement from location to location or by using as a tool crib with check-in and check-out capabilities on our fully customizable database will keep business moving in real-time, anywhere.

## Access Anywhere

Anytime Assets is a cloud-based system that allows easy access of data and information to all employees even on a smart mobile device. It traces the complete life cycle of an asset, from purchase to disposal.

If an auditor or regulator such as FAA needs to look at the calibration certificate of any device then it is very easily and quickly retrievable from Anytime Assets database. You won't need to dig through file cabinets or boxes to retrieve it. Since this is a cloud-based system, this access can be made from anywhere anytime.

“We had to keep it in filing cabinets. Nice to have that in the system where if we do need it, we can easily go access it.”

-Senior Materials Mgr., Constant Aviation-

## Custom Design

Anytime Assets can prioritize tasks, alerts, and notifications and share these visuals with different departments or with suppliers.

System alerts can be set up to notify specific users of a time-sensitive event. Anytime Assets can notify a tool owner when that piece of equipment is due in the next 30 days.
