

ANYTIME ASSETS

TOOLING & EQUIPMENT TRACKING SOFTWARE

Anytime Assets is a cloud-based asset management system that allows you to track any asset, anytime, anywhere. Designed for any company that has assets, big or small. Anytime Assets is easy to access from a desktop, laptop, or mobile device and can be used from the shop floor, in the warehouse, and at multiple facilities. The application automatically creates built-in reports, alerts, and tool image storage. Anytime Assets offers:

- Photo & document attachments
- Location tracking
- Access from any internet-connected device
- Certificate of Calibration attached to each tool
- Automated alerts
- System customization
- Quality compliance convenience
- Tooling assigned to people or work orders
- Tracking for non-calibrated items

Photos & Location Tracking

Anytime Assets allows users to upload images and set a location for each tool. The first time your tooling is calibrated by our technicians, a full record is created for each piece. The technicians take photos, note location (including if the tool is in transit), and input calibration intervals. Records can be edited by any system user to update information or attachments.

Photos of each item help Shipping & Receiving or Quality personnel identify unfamiliar tooling. Updated photos allow monitoring of tool condition over time. The ability to upload images provides visual confirmation of damage or repairs.

Do you ship tools between multiple locations? Anytime Assets will help you manage where tools and equipment are at all times. You can use the application to find a tool in your facility, check shipping status, or monitor tools loaned to another facility.

“The image attachments cut our time to locate tools in half. It’s much easier to find tooling when I know, clearly, what to look for.”

- Quality Manager, Manufacturer
